WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

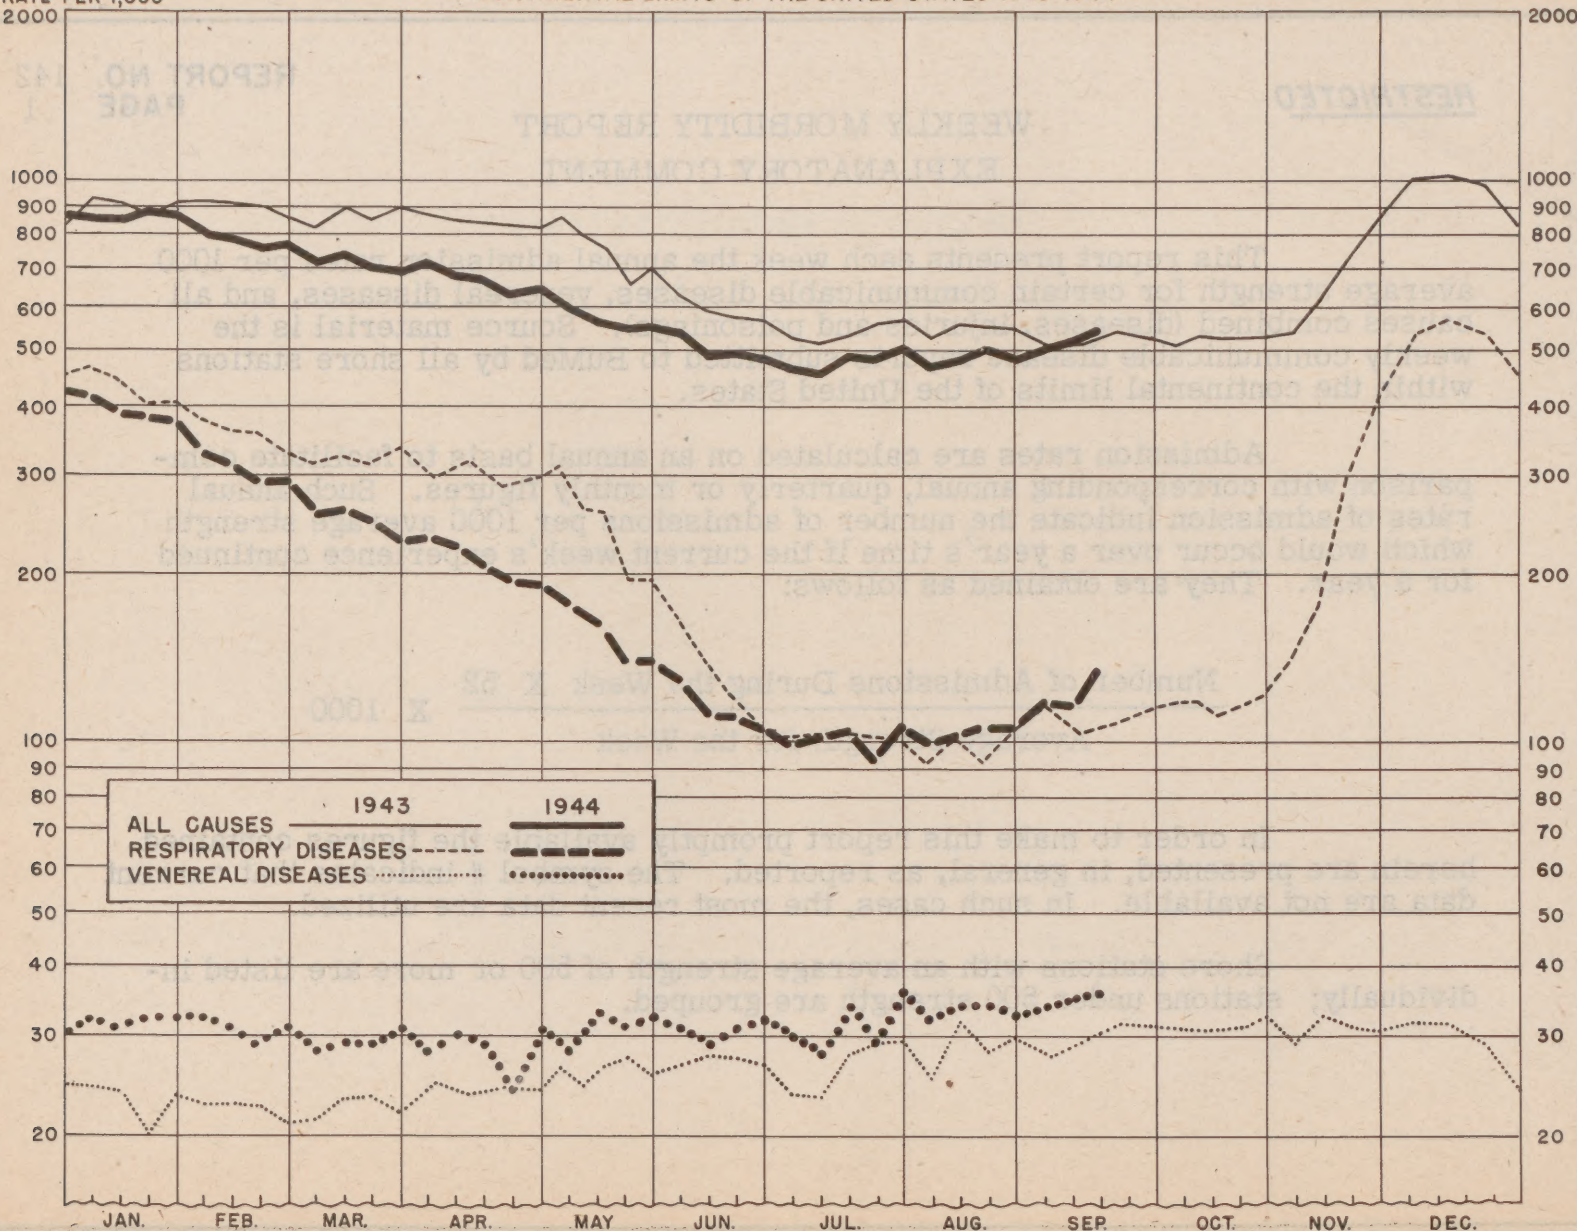

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

CURRENT TRENDS

Week Ending 16 Sep 1944

The admission rate for All Causes rose sharply again this week and the 1944 curve now stands for the first time above the 1943 curve for the corresponding period. The highest rate (956) was reported for the Potomac and Severn River Commands, the lowest (440) was reported for the 3rd District.

The respiratory disease curve also rose sharply and now stands well above the 1943 curve for the corresponding period. The 13th District reported the highest rate (296), the 7th District the lowest rate (92).

The venereal disease curve rose slightly and continues to stand above the 1943 curve for the corresponding period. The 8th District reported the highest rate (49), the 9th District the lowest rate (19).

Influenza and Catarrhal Fever. The curve for these infections continued upward again this week and now stands approximately at the May level. The 1944 curve continues to stand below the 1943 and the 1942 curve. The highest rate (150) was reported for the 9th District, the lowest (50) for the 12th District.

Pneumonia--Broncho and Lobar. The rate for these infections was reported again at 1. This compares favorably with a rate of 3.3 for the corresponding week of 1942, and a rate of 3.4 for the corresponding week of 1943. The highest rate (8) was reported for the 13th District. The 7th District reported no cases.

Pneumonia, Atypical. The atypical pneumonia rate continued another week at 2. The 1944 curve has continuously stood above the 1943 curve. The atypical pneumonia curve has stood above the broncho and lobar pneumonia curve since the first week in July. The highest rate (7) was reported for the 11th District. The 12th District reported no cases.

PAGE 4

CURRENT TRENDS --CONTD.

Tonsillitis and Pharyngitis, Acute. The rate for these infections rose this week and the curve now stands at the level recorded for the first week of June. The 13th District reported the highest rate (143), the 7th District the lowest rate (15).

Rheumatic Fever, Acute. The rheumatic fever rate rose slightly. The rate of 1 compares favorably with a rate of 1.2 for the corresponding week of 1943. The highest rate, by far, was that of (10) reported for the 13th District. No other District reported a rate over 2.

Scarlet Fever. The scarlet fever rate rose sharply again and the autumn trend upward is obvious. The 1944 curve, however, stands below the 1943 curve for the corresponding period. The highest rate is that of (91) reported for the 13th District. The only other District reporting a rate over 1 is the 9th District with a rate of (6).

Cerebrospinal Fever, Meningococcic. The rate for this infection rose slightly and the curve stands above both the 1942 and the 1943 curves for the corresponding period. The 13th District reported the highest rate (2).

Malaria. For the third consecutive week the rate for this infection was reported at 4. This compares favorably with a rate of 5.9 for the corresponding week of 1943. The 1st District reported the highest rate (8). The 7th, 9th, and 13th Districts reported the lowest rate (1).

Measles. After a slight rise in the previous week, the rate dropped slightly this week. The curve stands well below both the 1942 and the 1943 curves for the corresponding period. The 13th District reported the highest rate (3).

Poliomyelitis, Anterior, Acute. Three new cases of poliomyelitis were reported for the week by Continental Shore Stations-- 1 from the 9th District, 1 from the 13th District, and 1 from the Potomac River Command. The cumulative total of poliomyelitis cases reported from all Continental Stations Jan 1 through Sep 16 is 43.*

CURRENT TRENDS --CONTD.

The U. S. Public Health Service reports for the week show the civilian cases in the six States with the highest incidence, distributed as follows:

New York	497	Michigan	112
Pennsylvania	123	Maryland	54
Ohio	118	New Jersey	54

*Several of these cases were not reported on Weekly Morbidity Report NavMed-172.
